Lecture: Collaborative inter-institutional teaching

Lecture outline

Collaborative inter-institutional teaching offers an opportunity for both faculty and students from inter-disciplinary background to come together in a classroom setting that offers a platform for sharing knowledge, ideas and creativity, enriching the overall teaching and learning experience. Collaboration provides faculty members an opportunity to come together and share ideas, leading to overall professional development. Faculty members benefit by working with peers from diverse backgrounds. Students enjoy benefits through exposure to multiple disciplines (different approaches and specializations) through discussion with faculty and other students. Collaborative teaching improves the overall quality of education by providing different perspectives to a problem or topic. We will discuss the following topics in this lecture:

- Definition of collaborative inter-institutional teaching and its importance
- Benefits of collaborative teaching to faculty members and students
- Different collaborative teaching techniques
- Key points for successful inter-institutional collaboration
- Key points for successful team-teaching
- Two case studies from inter-institutional collaborative courses at the University of Texas at Austin by David R. Maidment
